

VADEMECUM FOR YOUNG BULLS DESTINATED TO ANAFIBJ GENETIC CENTER (ITALY)

- It is good practice that young bulls destined to the ANAFIBJ Genetic Center have a good body condition and that their growth is in line with the breed standard.
- As highlighted in **point 3 of Mod. A**, animals must be in good condition and clean and must not show any clinical symptoms of disease on the day of loading.
- As highlighted in **point 4 of Mod. A**, animals must not show any symptoms of infectious skin diseases (mange, ringworm...).
- It is preferable that a **coccicide treatment** be carried out about 15 days before entering the Genetic Center and/or any **coccidiostatic treatments** carried out are communicated.

COCCICIDE/COCCIDIOSTATIC TREATMENT	TREATMENT DATE

- If vaccination protocols (e.g., respiratory forms) are in place in herd origin, please notify them by filling in the table below.

VACCINE	TREATMENT DATE
